

WHAT IS CLAIMED IS:

A one-way valve incorporated on a hole under a nose cover of a diving mask, comprising

an inner base, with a base hole formed inside and a groove formed
5 around an outer perimeter, whereon a fixture hole formed on one side thereof;

a valve plate covered on the base hole of the inner base, wherein a fixture formed on one side designed to be inserted into the fixture hole on the inner base;

10 an outer base, with a base hole formed inside, wherein, a fixture strip, with a gap, formed on an inner perimeter and positioning projections formed on the outer perimeter; by inserting the fixture strip into the groove on the inner base and fitting the gap on the outer base to the fixture on the valve plate, thereby fixing the valve plate in position;

15 a lid, whereon drainage holes formed on a face and positioning holes, formed inside a groove of the outer perimeter; to be filled by the positioning projections on the outer base.
